Ministry of Education and Sports of Lao PDR and Australia invest in teaching and learning resources to strengthen climate resilience in primary education

POSTED ON 13 MAY 2026

Mr Phetmany Sylathmina, Deputy Director General of DTE chaired the meeting and explained the objective of the new teacher support resource

New Teacher Support Pack will help primary teachers bring climate change and disaster risk reduction into everyday lessons

The Ministry of Education and Sports (MoES), with support from Australia through the BEQUAL program, is organising a three-day workshop from 13 to 15 May 2026 to advance the development of Teacher Support Pack 15 (TSP 15) on the topic of climate change. The workshop brings together representatives from the Department of Teacher Education (DTE), the Resource Development Core Team (RDCT) from Khangkhai Teacher Training College, and the BEQUAL team to review lesson content, refine sample activities, and transform earlier curriculum mapping and field learning into practical materials for primary teachers.

Mr Phetmany Sylathmina, Deputy Director General of DTE shared the objective of the new teacher support resource *"This initiative aims to help primary teachers in Lao PDR integrate climate change and disaster risk reduction into everyday lessons in ways that are practical, meaningful, and closely linked to the national primary curriculum. Climate change is understood not only as a scientific topic but as a social issue that affects the livelihoods, wellbeing, and safety of every learner. The TSP module will focus on both knowledge and action in schools."*

In a separate interview, Mr Michael Currie, First Secretary, Australian Embassy, shared *"Australia is pleased to support MoES in this important work through BEQUAL. By strengthening basic education, we are helping equip students with the foundational knowledge and skills they need to face modern challenges with confidence. Climate change is not only an environmental issue, it is a social, economic and safety issue, that affects all of us."*

Participants from DTE, KK TTC and BEQUAL to develop TSP on Climate Change

Schools in Luang Prabang are presented to understand how they are working on disaster risk reduction, climate adaptation

The development of the TSP 15 began with a series of foundational workshops in February and March 2026, with RDCT members and DTE reviewing the Science and Environment and Lao Language curriculum for Grades 1-5 which were developed with Australian Government support. The team identified where climate change content already appears and where it can be strengthened. They also mapped curriculum content to climate change themes and began piloting classroom activities that show how climate issues can be addressed in everyday lessons across subjects and grade levels. This curriculum mapping is now providing the backbone for TSP 15, ensuring that every suggested activity and example is firmly grounded in what teachers are already expected to teach.

In early April, the team travelled to Luang Prabang Province for a study tour linked to the Lao Safe School Project and Green School initiatives. Over five days, they met with provincial and district education offices and visited primary schools in Luang Prabang and Nan districts to observe how schools are working on disaster risk reduction, climate change adaptation, and safe school management. The team learned about successful activities, benefits, challenges, and the roles of teachers, students, communities, and local authorities in keeping schools safe. These real-world examples, including child-led activities, hazard mapping, and school safety planning, will feed directly into the strategies and practical tools that TSP 15 will offer to teachers.

MoES and Australia invest in teaching and learning resources to strengthen climate resilience in primary education
